Contents

1 Introduction 1

2 Theoretical background 5
  2.1 Lasers ........................................ 5
      2.1.1 General principle of lasers .............. 5
      2.1.2 The pump laser .......................... 6
      2.1.3 The FIR laser ........................... 9
  2.2 Gaussian optics .............................. 13
  2.3 Capacitively coupled plasma discharges ....... 16
  2.4 Complex plasmas ............................ 20
      2.4.1 OML theory ............................. 20
      2.4.2 Non-isotropic plasmas—streaming ions .. 24
      2.4.3 Barrier in the effective potential ....... 27
      2.4.4 Ion-neutral collisions—angular momentum not conserved ... 28
      2.4.5 “Closely packed” dust grains ............. 30
      2.4.6 Summary of OML theory and neglected effects .... 30
      2.4.7 Forces acting on dust particles in a plasma ... 31
      2.4.8 Producing plasma crystals ............... 39
  2.5 Light scattering by small particles .......... 43
      2.5.1 Some basics of scattering theory ......... 44
      2.5.2 Rayleigh scattering by one particle ...... 47
      2.5.3 Scattered radiant flux at the detector .... 50

3 Setup 55
  3.1 The laser system ............................. 56
      3.1.1 The CO$_2$ laser ......................... 56
      3.1.2 The FIR resonator ....................... 60
      3.1.3 The mirror system ....................... 64
3.2 The scattering arrangement ........................................ 67
3.3 The plasma chamber ............................................... 72
3.4 Setup for calibration scattering experiments ................. 76
3.5 CCD camera diagnostics and video analysis ................. 77

4 Results ........................................................................ 81
4.1 Properties of the laser system ..................................... 81
   4.1.1 FIR laser operation and beam characteristics .......... 81
   4.1.2 The FIR laser power ........................................ 84
   4.1.3 Characteristics of the beam splitter ...................... 86
4.2 Results of calibration scattering experiments ................. 88
4.3 The crystal .......................................................... 91
   4.3.1 Design optimisations for producing plasma crystals ... 91
   4.3.2 Extended plasma crystals .................................. 94
   4.3.3 Flat crystals .................................................. 96
4.4 Scattering by the crystal .......................................... 99

5 Conclusion .................................................................... 105

Bibliography .................................................................. 115
