## Contents

**Important symbols and abbreviations** iii

**List of figures** ix

**Abstract** xvii

1 **Introduction** 1
1.1 History of HID lighting .............................. 1
1.2 High pressure discharge lamps ........................ 2
1.3 Thesis layout ............................................. 3

2 **Fundamentals** 5
2.1 Basics of arc discharges .............................. 5
2.1.1 Basic plasma processes ............................. 7
2.1.2 Basic plasma properties ........................... 8
2.1.3 Thermal equilibrium ............................... 9
2.1.4 Radiation processes inside a plasma .............. 10
2.1.5 Radiation transport ............................... 12
2.2 Electrodes of arc discharges ......................... 12
2.2.1 Surface effects on electrodes ..................... 13
2.2.2 Heat conduction of electrodes .................... 16
2.2.3 Heat balance of a periodically charged electrode 17
2.3 Acoustic resonances .................................. 18
2.4 Skin effect .............................................. 19

3 **Experimental setup** 21
3.1 Lamps under investigation ........................... 21
3.1.1 The Bochum model lamp ........................... 21
3.1.2 Ceramic Metal Halide Lamps ....................... 23
3.1.3 The function of metal halides and rare earths .... 25
3.2 Electrical lamp supply ............................... 26
3.2.1 Lf setup ............................................. 27
3.2.2 Rf setup ............................................. 29
3.3 Diagnostics ............................................. 30
3.3.1 Photography ......................................... 30
3.3.2 Spectroscopy ........................................ 31
3.3.3 Triggering and phase resolved measurements ..... 34
3.3.4 Electrode temperature measurements and power calculation 36
3.3.5 Plasma spectroscopy ............................... 45
| 3.3.6 Spectroscopic measurements inside the model lamp | 48 |
| 3.3.7 Spectroscopic investigations at the YAG lamps | 52 |
| 3.3.8 Electrical measurements | 57 |
| 3.3.9 Error estimations | 58 |

| 4 Measurements and results | 61 |
| 4.1 Fundamental research at the Bochum model lamp | 61 |
| 4.1.1 Optical investigations of the arc attachment | 61 |
| 4.1.2 Electrode temperature measurements | 64 |
| 4.1.3 Electrical measurements | 71 |
| 4.1.4 Spectroscopic measurements | 78 |
| 4.1.5 Determination of cathode and anode fall voltage | 83 |
| 4.2 YAG lamp results | 93 |
| 4.2.1 Pure Hg YAG lamps | 93 |
| 4.2.2 YAG lamps with MH fillings | 96 |
| 4.2.3 Gas phase emitter effect | 102 |
| 4.2.4 Emitter effect for complex lamp fillings | 114 |

| 5 Conclusions and outlook | 121 |
| 5.1 Results at the model lamp | 121 |
| 5.2 Results at the YAG lamps | 122 |
| 5.3 Outlook | 123 |

Bibliography 123

A Appendix A - 1
