Contents

1. Overview

I. Bcl-xL

2. Introduction
   2.1. Bcl-xL and its role in apoptosis
   2.2. The structure of Bcl-xL
   2.3. Characteristics of full-length Bcl-xL
   2.4. The interaction of Bcl-xL with BH3 ligands

3. Results
   3.1. Cloning, expression and purification of various Bcl-x constructs
   3.2. NMR spectroscopy of Bcl-xL
   3.3. NMR interaction studies of Bcl-xL with various peptides
   3.4. NMR titrations of Bcl-xL with ABT-263
   3.5. Crystal structure of Bcl-xL in complex with its inhibitor ABT-263
   3.6. Bcl-xL in LDAO micelles

4. Discussion
   4.1. The different Bcl-x constructs
   4.2. Implications for the structure of the Bcl-xL oligomer
   4.3. The consequences of peptide / inhibitor binding
   4.4. Bcl-xL in membraneous systems

5. Conclusion & Outlook

II. CupS

6. Introduction
   6.1. The cyanobacterial NDH-1 complex
   6.2. The subunits of the NDH-1 complex and their functions
   6.3. The structure of the NDH-1 complex
