1 Introduction and Motivation 1
  1.1 Objectives of the Present Work ........................................... 4
  1.2 Organization of the Present Work ........................................... 4

I Theoretical Framework 7

2 The Finite Element Method 9
  2.1 Introduction to the Finite Element Method ................................. 9
  2.2 Finite Elements for Linear Elasticity ....................................... 10
    2.2.1 The Weak Form of an Initial Boundary Value Problem in LE .... 10
    2.2.2 Discretization of the Weak Form with Finite Elements for LE .... 14
    2.2.3 Example: Plate with Circular Hole under Uniaxial Tension ....... 21
  2.3 The Finite Element Method for the Modeling of Porous Media .......... 24
    2.3.1 Introduction ............................................................ 24
    2.3.2 The Principle of Effective Stress ..................................... 25
    2.3.3 The Conservation of Mass ............................................. 25
    2.3.4 Darcy’s Law ........................................................... 27
    2.3.5 Equilibrium Equations ................................................ 27
    2.3.6 Weak Form of an Initial Boundary Value Problem in PE .......... 29
    2.3.7 Discretization of the Weak Form with Finite Elements for PE .... 30
    2.3.8 Time Domain Discretisation .......................................... 33
    2.3.9 Example: Consolidation Test ......................................... 34
3 Extended Finite Element Formulation

3.1 Introduction to the Extended Finite Element Method .................. 39
3.2 Basic Equations of a Body with a Discontinuity ..................... 40
  3.2.1 Divergence Theorem ........................................... 40
  3.2.2 The Weak Form of the Governing Equations .................... 41
3.3 The XFEM Discretization of Governing Equations .................... 43
3.4 Numerical Implementation of Fractures ............................... 46
  3.4.1 Enrichment Function for a Domain with Fracture Interface ..... 46
  3.4.2 The Signed Distance Function .................................. 47
  3.4.3 Numerical Integration of Elements with Discontinuity .......... 49
  3.4.4 Example: System with Vertical Strong Discontinuity .......... 53
3.5 Numerical Implementation of Voids .................................. 55
  3.5.1 XFEM Realization for Tensions on Hole Surfaces ............... 56
  3.5.2 Example: Plate with Hole under Tension ...................... 57
3.6 The XFEM Technique for Linear Elastic Fracture Mechanics ......... 61
  3.6.1 The Basis of Linear Elastic Fracture Mechanics ............... 61
  3.6.2 The XFEM Discretization of Governing Equations .............. 64
  3.6.3 The Stress Intensity Factors .................................... 68
  3.6.4 Crack Growth Criteria ............................................ 72
  3.6.5 Example: Plate with Crack under Tension ..................... 75
  3.6.6 Example: A Plate with Two Off-Center Holes and Two Cracks .. 77
3.7 Numerical Implementation of Fracture Junctions ..................... 78
3.8 Example: A Plate with Two Cracks Propagating from Two Centered Holes 81

4 Simulation of Hydraulic Fracturing ...................................... 83

4.1 Introduction to the Simulation of Hydraulic Fracturing ............... 83
4.2 Models for Hydraulic Fracturing in Impermeable Reservoir Rock .... 85
  4.2.1 The Khristianovic-Geertsma-de Klerk (KGD) Model ............ 85
  4.2.2 Analytical Solutions for the KGD Fracture Model by Geertsma and de Klerk and Spence and Sharp ................. 85
  4.2.3 Analytical Solutions for the KGD Fracture Model by Detournay .. 87
4.3 Hydraulic Fracturing in Impermeable Reservoir Rock using XFEM .... 92
  4.3.1 Governing Equations of the Coupled Hydro-Mechanical Problem 93
  4.3.2 Weak Form of the Governing Equations of the Coupled Hydro-Mechanical Problem .............................. 94
  4.3.3 Spatial Discretization .............................................. 95
  4.3.4 Discretization in Time ............................................. 97
  4.3.5 Newton-Raphson Algorithm ...................................... 97
  4.3.6 Coupled Solution Algorithm .................................... 98
  4.3.7 Example: Hydraulic Fracturing in Impermeable Reservoir Rock . 99
  4.3.8 Example: Junction of Multiple Hydraulic Fractures .......... 105
4.4 Models for Hydraulic Fracturing in Permeable Reservoir Rock ...... 109
