Abstract i
Acknowledgment iii
Contents v
List of Symbols ix
List of Abbreviations xv

1 Introduction 1
   1.1 Background .................................................. 1
   1.2 Motivation .................................................... 3
   1.3 Literature review .............................................. 6
       1.3.1 Numerical simulation in mechanized tunneling ........... 6
       1.3.2 Uncertainty and reliability analyses .................... 7
       1.3.3 Surrogate models ......................................... 9
   1.4 Overview of the dissertation .................................. 11
       1.4.1 Content of the dissertation .............................. 11
       1.4.2 Structure of the dissertation ............................ 13

2 Numerical Model for Mechanized Tunneling Processes 15
   2.1 Overview ....................................................... 15
   2.2 Numerical model $\text{ekate}$ for shield driven tunnels in soft soils ................ 16
   2.3 Prediction capability ......................................... 20
       2.3.1 Numerical model .......................................... 22
       2.3.2 Validation ................................................. 23

3 Uncertainty in Mechanized Tunneling 27
   3.1 Aleatoric Uncertainty .......................................... 27
       3.1.1 Stochastic numbers ....................................... 28
3.2 Epistemic Uncertainty ........................................... 30
   3.2.1 Intervals ..................................................... 31
   3.2.2 Fuzzy numbers ............................................. 32
3.3 Polymorphic Uncertainty ....................................... 33
   3.3.1 Probability boxes .......................................... 34
   3.3.2 Fuzzy stochastic numbers .................................. 34
3.4 Uncertainty quantification ..................................... 35
3.5 Computing with uncertain parameters ......................... 37
   3.5.1 Computing with stochastic numbers ...................... 37
   3.5.2 Computing with intervals and fuzzy numbers ........... 39
   3.5.3 Computing with polymorphic uncertainty ................. 46

4 Simulation-and-Monitoring-based Strategy for TBM Steering Assistance 49
   4.1 Simulation-based surrogate modeling strategy .............. 50
      4.1.1 Hybrid surrogate model for deterministic data .......... 50
      4.1.2 Hybrid surrogate model for interval data ............... 51
      4.1.3 Hybrid surrogate model for fuzzy data .................. 53
   4.2 Monitoring-based strategy .................................... 55
      4.2.1 Surrogate models updating with measurement .......... 55
      4.2.2 Retraining with measurement ............................ 56
      4.2.3 Monitoring locations .................................... 58

5 Surrogate Models in Mechanized Tunneling ...................... 59
   5.1 Design of Experiments ....................................... 60
   5.2 Artificial Neural Network ................................... 63
      5.2.1 Network Structure ....................................... 64
      5.2.2 Learning Algorithms .................................... 69
   5.3 Proper Orthogonal Decomposition ............................ 72
      5.3.1 POD with interpolation .................................. 74
      5.3.2 POD with missing data ................................... 80
      5.3.3 POD for settlement sensor placement ................. 84
   5.4 Non-Negative Matrix Factorization .......................... 85
      5.4.1 NNMF-RBF ................................................ 88
      5.4.2 Gappy NNMF .............................................. 88

6 Verification of the Hybrid Surrogate Models .................... 93
   6.1 Verification of the deterministic hybrid surrogate model .... 93
   6.2 Verification of the interval hybrid surrogate model .......... 95
   6.3 Verification of the fuzzy hybrid surrogate model ............ 100

7 Application Examples in Mechanized Tunneling .................. 107
   7.1 Real-time prediction of deterministic surface settlement fields .... 108
8 SMART Application

8.1 Project overview module ............................................. 146
8.2 Monitoring module ....................................................... 147
8.3 Prediction module .......................................................... 149
8.4 Additional features ....................................................... 150
  8.4.1 Damage analysis ...................................................... 150
  8.4.2 Reliability analysis ................................................... 151
  8.4.3 Design stage ........................................................... 153

9 Conclusions

9.1 Summary and concluding remarks ................................... 155
9.2 Outlook ................................................................. 157

Bibliography ............................................................... 159

List of Figures .................................................................... 177

List of Tables ...................................................................... 183

About the author ............................................................. 185
